## / LIVE SMART

We create systems that help people maintain independence in their own homes, providing our clients, their family and friends greater peace of mind.

Smart Living will design and adapt your space to improve independence in daily life by disabled, physically impaired or elderly people.

Our aim is to enhance individual well-being and allow people to take a greater sense of control. Our range of products and solutions provide a more independent lifestyle with the added comfort knowing that family or friends can monitor your status and well-being.

Smart Living design and install a highly secure system that provides safety and peace of mind. By using tablets or an iPad, these provide both at home and remote access and control to the resident/s and their environment.

## / INDEPENDENT

Flexible and extendable, Smart Living systems can be installed into new homes and commercial builds, or retrofitted into existing spaces.

### BENEFITS:

- **Total control** by iPad or tablet working as a virtual command centre - check on the homes status and alert family members, care givers or authorities with any potential problems.
- **Stay safe** by controlling access to the home via your tablet.
- Control internal and external **lighting**.
- Install sensors to **monitor and alert** of any trips or falls.
- **Remotely arm** and disarm your security system and notify people of security and fire alarms.
- **Climate control** - set water and room temperatures.
- At the push of a button your smart home turns into **'night mode'** closing gates and garage doors, pulling blinds, changing lighting and temperature, and arming your security system.

## / IN CONTROL

With the added benefit of **fire protection**, should smoke be detected, our system will turn on all the lights and provide a lit escape path while unlocking all the doors and signalling the appropriate response services.

You will sleep more peacefully with Smart Living. We are licenced installers experienced in all aspects of security installation and maintenance. Smart Living takes pride in delivering to the highest quality standard, and ensures our design and installation work is fully compliant with NZ Health & Safety regulations.

We will keep you fully informed throughout the consultation, design and installation process. Our advice and workmanship is backed up by twenty plus years industry expertise.

**Talk to us about how Smart Living systems can provide assurance and total control.**
